

CELLINK SKIN+ FIXATION FOR CRYO SECTIONING

This is a suggested procedure, please adjust according to your experimental needs.

Aim of the protocol:

This protocol is used for the fixation of cells in a cell-laden 3D bioprinted construct.

Materials needed:

- Paraformaldehyde (PFA). PFA must only be handled inside a fume hood
- 30% Sucrose in PBS
- Hank's Balanced Salt Solution (HBSS)
- OCT Cryo solution
- Embedding cassettes
- Cell-laden 3D bioprinted constructs

Protocol:

All handling and use of PFA must be done inside a fume hood with proper PPE.

Step n°	Title	Material	Description
1	Wash	<ul style="list-style-type: none"> ▪ HBSS ▪ 24 well plate 	❖ Transfer constructs to HBSS in a 24 well plate. 2 samples per condition.
2	Wash	<ul style="list-style-type: none"> ▪ HBSS 	❖ Wash constructs with HBSS once.
3	Fixation	<ul style="list-style-type: none"> ▪ 4% PFA 	❖ Add 1 ml 4% PFA to each well. Incubate for 1h at RT. NOTE! PFA must be handled in a fume hood
4	Wash	<ul style="list-style-type: none"> ▪ HBSS 	❖ Wash constructs with HBSS (or dPBS) twice.
5	Incubation	<ul style="list-style-type: none"> ▪ HBSS 	❖ Add 1 ml of HBSS to each well. Seal the plate with parafilm and incubate at 4°C for 45 min.
6	Sucrose treatment	<ul style="list-style-type: none"> ▪ 30% Sucrose in PBS 	❖ Add 1 ml sucrose 30% (diluted in PBS), incubate at RT for 45 min.

7	Preparation of embedding cassettes	<ul style="list-style-type: none"> ▪ OCT cryo solution ▪ Embedding cassettes 	❖ Add OCT to the embedding cassettes.
8	Transfer of constructs to OCT	<ul style="list-style-type: none"> ▪ OCT-laden embedding cassettes ▪ Cell-laden constructs 	❖ Transfer constructs to OCT-laden embedding cassette (2 per cassette, on a row in the centre). Ensure that the constructs are covered by OCT.
9	Storage	<ul style="list-style-type: none"> ▪ -80 Freezer 	❖ Store at -80C until analysis.

Want to see our talented Biologist proceed to this protocol? Feel free to find the video here:
